

# Cardiology ECG & Echo Report Advice & Guidance

Clinicians can combine Phone, Messages and Photos to get Cardiology A&G

Designed specifically for:

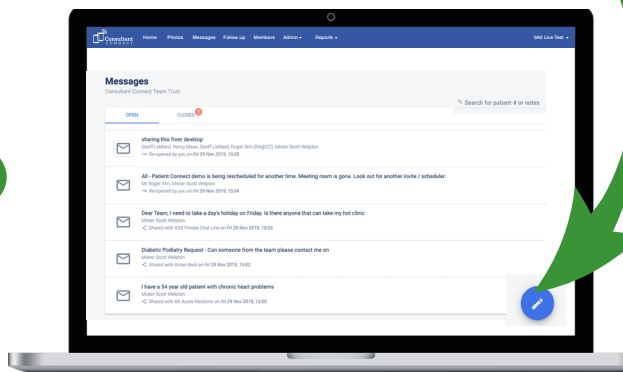

GPs, Community Advanced Nurse Practitioners, A&E Doctors or other Healthcare Professionals (**User**) who need specialist advice on a patient's ECG or Echo Report.

User opens up 'PhotoSAF' in the Consultant Connect App to take photo(s) of ECG/Echo Report(s)

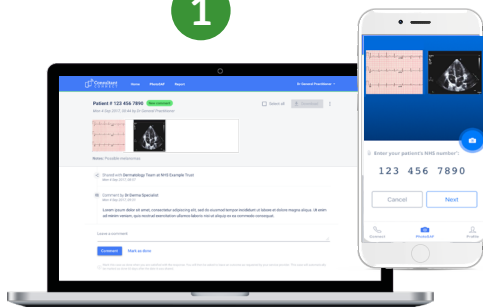

OR

User logs in via the Consultant Connect secure platform and selects 'Messages' from the main menu and the pen icon on the bottom of their screen to upload images

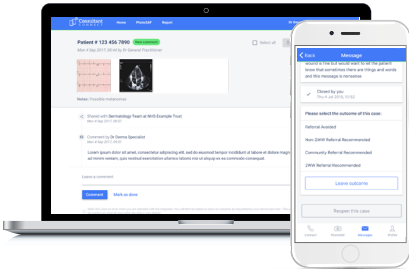

## How it works

1

- User either opens app or logs into the Consultant Connect platform on their computer ([consultantconnect.org.uk/service/login](http://consultantconnect.org.uk/service/login))
- User attaches ECG/Echo Report via the Consultant Connect Dashboard or takes photo of ECG/Echo Report via PhotoSAF on the Consultant Connect App, and selects Cardiology team
- User types or dictates a message and adds the patient's NHS number if available / appropriate
- User shares and sends message and image(s) with Cardiology team

2

- a) The Cardiology team is alerted to the message via:
  - an email (with link)
  - a notification within the app
  - a notification in dashboard inbox
- b) A Cardiologist can then respond to the request either in the app or on their computer

3

- a) At the end of the conversation either the User or Cardiologist provides the outcome of the interaction (e.g. outpatient referral avoided, patient sent to A&E, patient discharged from A&E), which closes the case.
- b) The conversation is securely saved
- c) The images and notes from the case can be exported as a PDF and attached to patient records.

## For more complex queries

The Cardiologist could opt to call the User directly via the app. If they don't connect (e.g the User is busy) the Cardiologist can use messages or photos or both to communicate with the User. The User can respond by any of these options or a combination of them.
